

AppFueled Client Documentation Overview

Agreement, onboarding, support, licensing, modules and security

ReferACar, LLC dba AppFueled | 5465 E Terra Linda Way, Nampa, ID 83687

Prepared for: Brian Rosenthal

Attention: Matt Gear

Date: September 9, 2026

Prepared by: Jeremy Glassco, Founder and CEO, ReferACar, LLC dba AppFueled

Thank you for the request. This document summarizes the AppFueled agreement, onboarding timeline, support model, licensing structure and platform modules, along with a companion Security Overview. If your IT or compliance reviewer needs anything in a different format, or needs a vendor questionnaire completed, send it over and we will turn it around quickly.

1. Agreement

Services are provided under the AppFueled Software as a Subscription Agreement, executed electronically with a signature audit trail. A copy of the executed agreement accompanies this document. The plan, rate and included quotas are stated on the executed agreement itself.

Item	Detail
Provider	ReferACar, LLC, an Idaho limited liability company, doing business as AppFueled
Provider address	5465 E Terra Linda Way, Nampa, ID 83687
Structure	Software as a subscription, licensed per store location
Term	Month to month, auto renewing at the then current rate
Cancellation	Written notice to get@appfueled.com at least 30 days before the next billing date
Payment authorization	Credit Card Recurring Payment Authorization executed with the agreement
Governing law	State of Idaho
Dispute resolution	Binding arbitration before the American Arbitration Association
Data on termination	Self service export available for 30 days after the effective termination date

Usage based add on charges, covering items such as carrier lookups, message and call volume above the included allowances, AI tokens and transcription, are itemized in Section 5 of the agreement and billed with the monthly recurring charge.

2. Onboarding and Install Timeline

AppFueled is a hosted, multi tenant web application. There is no server side install at the shop and no software for the shop team to maintain or patch. The only client side component is the SideKick Ninja Chrome

extension, which each user installs on their own workstation, so install dates vary by user rather than being a single site wide cutover.

Milestone	Typical timeframe	Owner
Account provisioning, CRM setup, shop management system integration and data sync	15 to 21 days from signature	AppFueled, with client authorized credentials
My Oil Sticker printer shipment	5 to 7 business days from signature	AppFueled
A2P 10DLC brand and campaign registration	7 to 10 business days from submission	AppFueled, client provides business details
Branded mobile app store listing	Within 30 days of the client inviting AppFueled to their Apple Developer account	AppFueled, gated by client invitation and store review
SideKick Ninja Chrome extension rollout	Minutes per user, installed as each user is onboarded	Per user, client side
Web application access	Available as soon as the account is provisioned	Client users

Two timelines depend on parties outside AppFueled control. A2P 10DLC registration is reviewed by the carriers, and mobile app publication is subject to Apple and Google store review. The Apple Developer Program license (\$99 per year) is held and renewed by the client under Section 9.5 of the agreement. If it lapses, the app is removed from the App Store until it is renewed.

3. Support

Support is included in the subscription. There is no separate support contract to sign and no additional support fee.

Item	Detail
Included with subscription	Yes, at no additional charge
Email support	get@appfueled.com
Ticket system	appfueled.com/help
Coverage hours	8:00 a.m. to 5:00 p.m. Central, Monday through Friday
Target first response	Within 1 hour during support hours
Critical outage response	Within 15 minutes during support hours
Escalation contact	Jeremy Glassco, Founder and CEO, jeremyg@appfueled.com
Maintenance and updates	Delivered continuously to the hosted platform at no charge, per Section 9.4 of the agreement

If your organization requires a formal service level agreement with contractual remedies, we can prepare an SLA addendum to the existing agreement.

4. Licensing

Under Section 2.1 of the agreement, AppFueled grants a personal, limited, nonexclusive, nontransferable right to use the Services for the term of the subscription. AppFueled retains all intellectual property in the platform. This is a subscription license, not a perpetual license. No source code is delivered or escrowed.

Licensed item	Licensing basis
AppFueled platform	Per store location, as stated on the executed agreement
SideKick Ninja users	Unlimited users at the licensed location, no per seat fee
SideKick Ninja Chrome extension	Per user install, no seat fee
Branded customer mobile app	Per store location
My Oil Sticker printer and software	Per store location
Additional store locations	Separate agreement per location
Apple Developer Program license	Held and renewed by the client, \$99 per year
Usage above included allowances	Metered and billed as incurred, per Section 5 of the agreement

Restrictions worth flagging for a reviewer: the Services may not be resold, sublicensed, reproduced, deconstructed or made available to third parties, and the agreement may not be assigned by the client without written approval from AppFueled (Sections 2.2 and 16).

5. Platform Modules

The AppFueled platform is delivered as an integrated suite. Module availability by plan is stated on the executed agreement.

- **Custom branded loyalty and customer mobile app.** A shop branded iOS and Android app with push notifications, loyalty, service history and rewards.
- **CRM.** Customer records, vehicle profiles, service history, segmentation and campaign tools.
- **Online booking tool.** Customer facing appointment requests that flow into the CRM and the shop management system.
- **My Oil Sticker printer.** Intelligent oil change sticker printing with a label printer and companion software.
- **Call Center Concierge Suite.** Inbound and outbound calling inside the platform, caller identification, call recording and voicemail.
- **SideKick Ninja.** The service advisor workspace, including the Chrome extension for live call context and data capture at the counter.
- **Inbound phone package.** Provisioned phone numbers and inbound call handling, with metered minutes beyond the included allowance.
- **Two way text messaging (SMS and MMS).** A2P 10DLC registered messaging with opt out handling.

- **AI transcription and assist features.** Call and voicemail transcription and AI assisted workflows, metered per Section 5 of the agreement.
- **Shop management system integration.** Bi directional sync with Tekmetric, Shop-Ware, Protractor and R.O. Writer. Additional systems evaluated on request.

6. Security Documentation

The accompanying AppFueled Security Overview covers architecture, access control, encryption, payment card handling, independent assessment, backup and recovery, data retention and subprocessors. Headline points:

- All external access to the platform is encrypted over SSL/TLS.
- All internal and administrative access is restricted to a WireGuard VPN.
- Two factor authentication is required for web application users.
- Hosted on Amazon Web Services in the US East (Ohio) region, with RDS storage encryption enabled.
- Automated daily backups with point in time recovery. Recovery point objective of 5 minutes and recovery time objective of 4 hours.
- Payment card data is tokenized by the payment processor. AppFueled does not store full card numbers.
- Independent security assessment sponsored by the Boise State University cybersecurity program, March 2025. Findings remediated.
